

Alumwell Nursery Garden Adventures

Session 2 - Planting broad beans and
spinach and finding worms

We looked at
some broad
bean seeds.
They were hard
and brown.
We put one in a
jar to look at in
the classroom.

We planted the rest of the broad beans out in the allotment. We looked to see if we could see our onions or garlic, but nothing was showing yet.

There was a potato plant growing in one of the planters, we didn't put it there?

We put labels in our planters to show everyone what we had planted. We also hung some bird and squirrel scarers up to stop our broad beans, spinach and onions and garlic getting eaten.

We looked at some spinach seeds that were small and spiky.
We planted these seeds in rows.

We were very happy to find lots of worms and bugs in our soil which shows that it is very healthy soil.
