

Alumwell Nursery Garden Adventures

Session 7 - Taking part in the RHS
Grow With It! project

Today we have some seeds from the RHS Grow With It! project to sow. We have chives, cosmos and cornflower seeds. They all look very different.

Before we sowed our seeds we needed to make some more potting compost with some soil, some grit and some vermiculite.

All of the seeds were very small so we needed to be careful when we were picking them up and sowing them. We planted the cosmos and cornflower in pots. We put a label with our pots so that we would remember which seeds they were.

We sowed the chives directly in the vegetable bed and we used our thumb and finger to pick up some chive seed and sprinkle them in the rows in the soil.

Next we needed to give our seeds some water. We used our watering cans with a rose on the end so that the water would come out like rain.

Alumwell wellies came to look round the allotment and see what was growing. They also had a go at digging and using the trowels and forks.

And finally we used our watering cans to fill up our new water butt. Hopefully the rain will fill up our water butt ready for next time.
