

Alumwell Nursery Garden Adventures

Session 8 - Planting a herb garden, some
sweet peas, some beans and lots of watering

Today we smelt different herbs. Some smelt like toothpaste, some smelt like fruit and some like perfume. You had to rub the leaves between your fingers to smell them properly.

We dug holes to plant the herbs into.

Then we made sure we gave them a really good water because it hasn't rained for a long while and the ground is very hard and dry.

Then we gave everything else in the allotment a really good water because all the plants that are growing looked very thirsty.

Next we planted some sweet peas into the big tyres in the playground. We planted them around the daffodils that are nearly over now. Miss Jayes had put some bamboo canes for the sweet peas to climb up. We are going to watch to see how high they grow.

The sweet peas also
needed lots of water.

We planted some bean seeds with Alumwellies.
They had to fill their pots with soil and then push their beans into the soil.
Then we watered our pots.
